Experience

Macquarie University, North Ryde — *Data Science Internship*

- Created a business model predicting student enrolments in Macquarie University using Math, Python and Data Science techniques
- A presentation was made to the faculty director of Ancient History and a Solutions Architect to show and prove a big inefficiency in the faculty's course structure. Convincing them that major changes must be made
- The project was originally for both a mathematician and a statistician, however I had to quickly fill in both roles on my own with very little supervision

Education

B.Cs Math major & Computer Science minor — Macquarie University, North Ryde

High School Certificate — Loyola Senior High School, Mt Druitt

Job-related skills

Front-end skills:

- *HTML5*
- *CSS3*
- *Javascript ES5/ES6*
- *React*

Back-end skills:

- *Node*
- *Express*
- *Mongoose/MongoDB*

You can find examples of my code and work on the provided website above.
